History The A class was developed from the British Thomson-Houston designed 0-6-0ST A and B classes in 1908. The design included both equal and unequal cylinder diameter sections. The A and B classes were both designed by William George Hale. The A class was purchased in 1908 and the B class in 1909. After 1915 only two A class locomotives were purchased and the remaining ten locomotives, of which nine were converted from the B class, were designated B class in 1915. In 1912, the A class locomotives were in service in Victoria and in 1914 the B class locomotives were in service in Victoria.
